

## Totally Integrated Roof System

**Modul-System is launching their own system for roof mounted accessories.**

**The assortment includes roof bars, a pipe carrier and accessories.**

**“As we will utilize the vehicle’s existing fixing points, installation can be done without drilling holes in the vehicle roof”, says Thomas Johansson, Vice President of Modul-System.**

Being a total solution provider, Modul-System has offered roof mounted accessories to their customers for a long time.

“The difference from before is that we now develop and produce them ourselves, which enables us to offer top quality products with confidence”, says Thomas Johansson.

The system comprises of roof bars, a lockable pipe carrier and accessories. The roof bars’ aerodynamic design will reduce noise and aid fuel efficiency.

To optimize weight, the bars are made from aluminum, and the integrated T-track is used to fix brackets, load stops, lashing and other accessories. All brackets are made from powder-coated galvanized steel and finishing details like end caps are made from plastic.

“We aim to use the right material in the right place to optimize weight, robustness, functionality and design”, says Thomas Johansson.

Having the design in-house, Modul-System has been able to create a system which fits their assortment perfectly. For example, all brackets are designed for their complete range of lights and beacons, which will facilitate installation.

The roof bars are engineered to withstand the stated vehicle roof load.

“By that we mean everything from daily use, to the forces it will be subjected to in the event of an accident. They are of course designed to withstand outdoor weather conditions and meet all legal requirements”, says Thomas Johansson.

Lightweight and robustness is what Modul-System is all about. Their racking solutions are known to cope with heavy workloads, while being one of the lightest on the market. The integrated roof accessory system is designed in the same way.

### *About Modul-System*

*Modul-System develops, manufactures and installs racking systems and equipment for service vehicles. The company is represented in 40 countries and has close to 50 years of experience in the industry. Modul-System is part of the Lifco group. Its head office is located in Mölndal just outside Gothenburg. For more information, please visit [www.modul-system.com](http://www.modul-system.com).*
