

Control your Eberspächer heater with Modul-Connect

Modul-System's Modul-Connect app now supports the control of Eberspächer heaters. This project is a collaboration where Modul-System's innovative and robust platform and Eberspächer's world-leading technology have been combined and made it easier than ever for you to control your heater.

Modul-System is one of the world's leading manufacturers of van racking systems and vehicle equipment for the LCV market and have over the years developed Modul-Connect, a system for monitoring and controlling various functions in your vehicle through an app and also by remote switch panels. Now Modul-Connect can do even more and control the powerful Eberspächer Airtronic heater just as simply. Set the desired temperature and how long it should run, and let the workday begin in the best possible way while Eberspächer's efficient heater heats the cabin.

" Our goal is to develop products that save both time and money for our customers. To be able to offer even more functions that our customers can control via Modul-Connect feels great." Says Thomas Johansson, Vice President of Modul-System.

With its extensive experience, Eberspächer have developed high-quality heating systems designed to manage the heating requirements in your vehicles at varying outdoor temperatures. For the colder days, the Eberspächer Airtronic quickly heats up your cabin and during the warmer days you can easily switch on the built-in fan.

" We are convinced that this collaboration will benefit both the customer and the environment since the Airtronic is both fuel efficient and works fast and efficiently with heating the passenger cabin. ", Says Thomas Johansson.

For the owners of a Modul-Connect PRO box, the possibilities with Eberspächer's heaters will advance even more. By connecting the heater to the Modul-Connect PRO box, features such as controlling start and stop in the app regardless of where you are, set timers and schedules for when the heater should run, will be enabled.

" With schedules the heater will never have to run more than necessary whilst the driver always comes out to a heated vehicle, free from both ice and snow.", Says Thomas Johansson.

About Modul-System

Modul-System develops, manufactures and installs racking systems and equipment for service vehicles. The company is represented in 40 countries and has close to 50 years of experience in the industry. Modul-System is part of the Lifco group. Its head office is located in Mölndal just outside Gothenburg. For more information, please visit www.modul-system.com
